

Acceptance

One short year ago Lockheed introduced the world's fastest transport...named it the Lodestar. 1940 approved it...granted it acceptance.

But no one can predict 1941! Lockheed was founded to build commercial transports. Now, the weight of its energies has been turned to the construction of bombers and fighters.

Lockheed plants have been expanded 600% in two years. But that is unimportant...compared to the accumulation of learning...advancement of

design...and experience in production that go hand in hand with this unparalleled expansion.

Peace and normality *will* be earned again. Then ...and only then ...will these armament-born assets...these thousands of skilled craftsmen...be again devoted to the original Lockheed purpose—a balanced program of building airplanes for the people of the world who will fly and enjoy them as they do automobiles today. Lockheed Aircraft Corporation, Burbank, California.
